Understanding trading fees on Polymarket

Polymarket charges a small taker fee on certain markets. These fees fund the [Maker Rebates Program](#), which redistributes fees daily to market makers to incentivize deeper liquidity and tighter spreads.

Geopolitical and world events markets are fee-free. Polymarket does not charge fees or profit from trading activity on these markets. There are also no Polymarket fees to deposit or withdraw USDC (though intermediaries like Coinbase or MoonPay may charge their own fees).

 Fees apply only to markets deployed on or after the activation date. Pre-existing markets are unaffected. Markets with fees enabled have `feesEnabled` set to `true` on the market object.

Fee Structure

Fees are calculated using the following formula:

Where **C** = number of shares traded and **p** = price of the shares.

Makers are never charged fees. Only takers pay fees. The fee parameters differ by market category:

Category	Taker Fee Rate	Maker Fee Rate	Maker Rebate
Crypto	0.072	0	20%
Sports	0.03	0	25%
Finance	0.04	0	25%
Politics	0.04	0	25%
Economics	0.05	0	25%
Culture	0.05	0	25%
Weather	0.05	0	25%
Other / General	0.05	0	25%
Mentions	0.04	0	25%
Tech	0.04	0	25%
Geopolitics	0	0	—

Taker fees are calculated in USDC and vary based on the share price. However, fees are collected in shares on buy orders

and USDC on sell orders. The fee amount in USDC is symmetric around 50% probability — a trade at 30¢ incurs the same dollar fee as a trade at 70¢.

Taker fee (in USDC) by share price for 100 shares

\$0.85	\$85	\$0.92
\$0.90	\$90	\$0.65
* - - -	* - -	* - - -

The fee in USDC peaks at 0.7% probability (0.000007) and decreases symmetrically toward both extremes.

Fee Precision

Fees are rounded to 5 decimal places. The smallest fee charged is **0.00001 USDC**. Anything smaller rounds to zero, so very small trades near the extremes may incur no fee at all.

Identifying Fee-Enabled Markets

Markets with fees have `feesEnabled` set to `true` on the market object. You can also query the fee-rate endpoint to check any specific market. See the [API Reference](#) for full endpoint documentation.

```
GET https://clob.polymarket.com/fee-rate?token_id={token_id}
```

Fee Handling for API Users

Using the SDK

Trading > Fees

JS

TypeScript

```
npm install @polymarket/clob-client@latest
```

Python

Python

```
pip install --upgrade py-clob-client
```

Rust

Rust

```
cargo add polymarket-client-sdk
```

What the client does automatically:

1. Fetches the fee rate for the market's token ID
2. Includes `feeRateBps` in the order structure
3. Signs the order with the fee rate included

You don't need to do anything extra. Your orders will work on fee-enabled markets.

Using the REST API

If you're calling the REST API directly or building your own order signing, you must manually include the fee rate in your signed order payload.

Step 1: Fetch the fee rate for the token ID before creating your order:

```
GET https://clob.polymarket.com/fee-rate?token_id={token_id}
```

Step 2: Add the `feeRateBps` field to your order object. This value is part of the signed payload — the OLCB validates your signature against it.

```
{
  "salt": "12345",
  "maker": "0x...",
  "signer": "0x...",
  "taker": "0x...",
  "tokenId": "71321045679252212594626385532706912750332728571942532289631379312455583992563",
  "makerAmount": "500000000",
  "takerAmount": "1000000000",
  "expiration": "0",
  "nonce": "0",
  "feeRateBps": "1000",
  "side": "0",
  "signatureType": 2,
  "signature": "0x..."
}
```

Step 3: Sign and submit:

1. Include `feeRateBps` in the order object **before signing**
2. Sign the complete order
